

The MC Forms product provides the capability to print MCMS forms to laser printers, and much more. Companies using MC Forms will incur savings by using plain paper and laser printers instead of expensive pre-printed forms. In addition, MC Forms can help significantly reduce the overall paper generated by your operation.

Features and Benefits

- ◆ Design forms with any Windows compatible product (e.g. MS Word, Corel Draw, etc.). Logos can be scanned in and formatted as desired. Compusource personnel can help design the forms, or just overlay the MCMS data onto a form provided by you.
- ◆ Define multiple pages of a document to print different information on each page. For example, page 1 of a sales order might say OFFICE COPY, page 2 might say WAREHOUSE COPY, page 3 could say SALES COPY, etc. Pages 1 & 3 might print prices and totals, but page 2 would have this information blanked out.

- ◆ Interface with the MC Fax and MC Net/E-mail products, to allow documents to automatically be printed, faxed and/or e-mailed. For example, upon completion of a purchase order, MC Forms could automatically print a copy to the purchasing manager's printer, print a copy to the sales printer, fax a copy to the vendor's corporate site, and e-mail a copy to the vendor's salesperson.

Requirements

Laser printers should be configured as network printers and be connected to printservers on your network.
