

# VanS

The **VanS Operations** system is an integrated **VanS** module that assists in the scheduling and dispatching of the personnel and equipment needed to complete a successful move. Tasks are scheduled to be completed at specific dates and times, and are assigned drivers, equipment, crews, helpers, and other required resources.

## Scheduling

- ◆ Assign pack, load, and delivery tasks to specific dates and times.
- ◆ Drivers, crews, equipment and other resources can be assigned to scheduled tasks using user-definable inquiry screens.

## Determining Available Resources

- ◆ Available resources (i.e. drivers, equipment, crews, helpers) can be viewed in a calendar format.
- ◆ Scheduled tasks can be easily matched to available resources and viewed or printed for a specific day, or a ten day spread.

## Viewing Options

- ◆ Seven pre-defined screens plus three additional customer-defined screens permit multiple views of scheduling requirements, including both assigned and available resources.

- ◆ The primary dispatch screen can be tailored to fit the unique information needs of each moving company.

## Reports

- ◆ A few of the Operations Report options include:
  - User-defined Dispatch Report/Day Sheet
  - Preferred Date Dispatch Report
  - Scheduled Tasks Report
  - Unassigned Tasks Report
  - New/Changed Dispatch Items
  - Unscheduled Tasks Report

## Interfaces

- ◆ Complete dispatch history is maintained and accessible through the **VanS** Order Entry system.
- ◆ Fully integrated with other **VanS** applications including Order Processing, Forms Designer, Driver Processing and Application Manager.
